SUMMARY

Accomplished Software Engineer with 3.5+ years building reliable, scalable services in **Go** and **Node.js** with **React.js** front-ends, across **AWS**, **Azure**, and **GCP**, with strong grounding in software design/architecture tradeoffs, containerized **microservices**, and the full **SDLC**. Core contributor to four open-source products at Turbot (120+ merged pull requests, 9,300+ GitHub stars), shipping a containerized **Go/Gin** microservice on **AWS** EC2 and leading a production **AWS** SDK v2-to-v3 migration across 180+ call sites.

TECHNICAL SKILLS

Languages: Go (Golang), Python, TypeScript, JavaScript (ES6+), SQL

Frontend: React, MUI, HTML, CSS

Backend & APIs: Microservices, Event-Driven Architecture, Distributed Systems, REST, gRPC, WebSockets, Node.js, Gin

Cloud & DevOps: AWS (Lambda, EC2, S3), Azure, GCP, Docker, Kubernetes (working knowledge), GitHub Actions (CI/CD)

Testing & Quality: Unit Testing, Integration Testing, End-to-End Testing, Jest, Mocha, Code Review

Core CS: Data Structures & Algorithms, Object-Oriented Design, System Design, API Design, Software Development Life Cycle (SDLC)

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Core contributor across all four Turbot open-source products (Steampipe, Powerpipe, Flowpipe, Tailpipe) — 120+ merged pull requests and 4,200+ commits across 79 repositories, with 9,300+ combined GitHub stars.
- Designed and developed an internal REST API microservice in **Go** using the Gin framework to power the backend of Turbot Guardrails, a Preventive Security Posture Management (PSPM) SaaS product; secured endpoints with JWT client-token authentication, containerized with **Docker**, deployed to **AWS** EC2, and served as a **gRPC** client for several internal **microservices**.
- Engineered core features for Tailpipe, a **Go**-based observability CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes to DuckDB; reduced memory use to eliminate out-of-memory failures.
- Led the **AWS** SDK for JavaScript v2 to v3 migration across 180+ call sites and 11+ **AWS** services in production **Node.js** Lambdas, refactoring discovery, configuration-sync, tagging, and resource-cleanup workflows; kept the platform supported past **AWS** SDK v2 EOL and unblocked the **Node.js** runtime upgrade.
- Added multi-distro Linux smoke tests (ephemeral environments) for Turbot's **Go** CLIs to the GitHub Actions release/CI-CD pipeline, hardening release safety and catching regressions across Linux distributions before deployment.
- Resolved a production incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff, collaborating with the platform team to investigate pod logs and status and restore service.

Trisetra, Inc. Remote

February 2022 – June 2022

Frontend Software Developer Intern (SDE Intern)

- Led the user-upload workflow redesign across 60+ files in **React** (Google Maps autocomplete, drag-and-drop upload, history dashboard, invite-code sign-up, improved empty/error states), driving increased user engagement.

PROJECTS

Lila Tic-Tac-Toe — Real-Time Multiplayer Game (2026)

Built end to end in 4 days. **React** 19 + TypeScript + Vite on Vercel; Nakama game server (**Go** core + TS runtime) on Fly.io with PostgreSQL. Server-authoritative anti-cheat over WebSocket transport, mode-aware matchmaking via KV-storage queues, tick-based turn timer, and a top-10 leaderboard.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28
