SUMMARY

Platform Engineer with 3.5+ years of experience and expertise in **Docker**, **Linux** production troubleshooting, **distributed** systems, and **Kubernetes**. Hardened release reliability for four open-source **Go** CLIs at Turbot HQ by adding multi-distro **Linux** smoke tests (CentOS, Ubuntu ARM64, macOS) to the **CI/CD** pipeline, catching platform regressions before deployment.

TECHNICAL SKILLS

Languages: Go, Python, Bash, SQL

Containers & Distributed Systems: Docker, Kubernetes (working knowledge; collaborate with platform teams), Microservices, Distributed Systems, Event-Driven Architecture, gRPC, Apache Kafka (consumer groups, DLQs)

Linux & Production Operations: Multi-distro Linux (CentOS, Ubuntu ARM64, macOS), production incident diagnosis & troubleshooting, release engineering

CI/CD & DevOps: GitHub Actions, Git, GHCR Docker image tagging, Terraform, OpenTofu

Observability & Monitoring: Datadog, OpenTelemetry (OTel); metrics, logging, tracing, incident triage

Cloud Platforms: AWS (EC2, Lambda, S3), Azure, GCP

Backend & APIs: REST, OAuth 2.0 (Auth0), JWT

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Added multi-distro **Linux** smoke tests (ephemeral environments across CentOS, Ubuntu ARM64, macOS) to the **GitHub Actions** release pipeline for four open-source **Go** CLIs, hardening release safety and catching platform-specific regressions before deployment.
- Resolved a production incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff — investigating pod logs and status remotely and collaborating with the platform team to restore service.
- Designed and developed an internal REST API microservice in **Go** using the Gin framework, containerized with **Docker** and deployed to AWS EC2, secured with OAuth 2.0 authentication via Auth0, and served as a gRPC client for several internal **distributed** microservices.
- Built a Kafka-based, fire-and-forget **distributed** event pipeline where consumers asynchronously processed policy-enforcement events, with a dead-letter queue (DLQ) to capture recurring failures for manual investigation and debugging.
- Engineered core features for Tailpipe, a **Go**-based observability CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes, and reducing memory use to eliminate out-of-memory failures.
- Owned release engineering for four open-source **Go** CLIs (Steampipe, Powerpipe, Flowpipe, Tailpipe) — unified **GitHub Actions** release/version workflows, automated Slack release notifications, and GHCR **Docker** image tagging.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
