SUMMARY

Senior NodeJS Engineer with 3.5+ years of experience and expertise in **Node.js**, distributed backend systems, event-driven architecture (**Kafka**, **SNS**), and cloud-native **AWS** deployments. Led the **AWS** SDK for JavaScript v2 to v3 migration across 180+ call sites and 11+ **AWS** services in production **Node.js** Lambdas at Turbot HQ, cutting policy-code duplication ~60% while keeping the platform supported past **AWS** SDK v2 end-of-life.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript (ES6+), SQL, Bash

Backend & APIs (Node.js focus): Node.js, Express.js, REST, gRPC, Microservices, Distributed Systems, OAuth 2.0 (Auth0), JWT, Bun

Messaging & Event-Driven: Apache Kafka (consumer groups, DLQs), AWS SNS/SQS, AWS EventBridge, Azure Event Grid

Cloud & Containers: AWS (Lambda, EC2, S3, SecurityHub, GuardDuty, ControlTower, Shield, X-Ray, Comprehend, Pinpoint, RAM, EFS), Docker, Kubernetes (working knowledge; collaborate with platform teams)

Databases & Caching: PostgreSQL, MySQL, DuckDB, MongoDB, Redis (ElastiCache); jsonb, CTEs, query tuning

IaC & DevOps: Terraform, OpenTofu, HCL, GitHub Actions, GHCR, Git

Testing & Quality: Unit Testing, Integration Testing, Automated CI Testing, Code Review

Core CS: Data Structures & Algorithms, Object-Oriented Design, Low-Level & High-Level System Design, API Design

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Led the **AWS** SDK for JavaScript v2 to v3 migration across 180+ call sites and 11+ **AWS** services (SecurityHub, CloudWatch, ControlTower, Shield, Comprehend, Pinpoint, RAM, X-Ray, EC2, EFS) in production **Node.js** Lambdas, refactoring discovery, configuration-sync, tagging, and resource-cleanup workflows; reduced policy-code duplication ~60% via templating, keeping the platform supported past **AWS** SDK v2 EOL and unblocking the **Node.js** runtime upgrade.
- Built a **Kafka**-based, event-driven distributed pipeline where consumers asynchronously processed policy-enforcement events and fired a webhook once a policy was successfully enforced against a resource; added a dead-letter queue (DLQ) to capture recurring failures for debugging.
- Designed and developed an internal REST API microservice in Go using the Gin framework as part of a greenfield build of Turbot Guardrails; secured endpoints with OAuth 2.0 authentication via Auth0, containerized with **Docker**, deployed to **AWS** EC2, and served as a gRPC client for several internal distributed **microservices**.
- Engineered core features for Tailpipe, an observability CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes; reduced memory use to eliminate out-of-memory failures at scale.
- Optimized complex PostgreSQL queries powering customer compliance audits — rewriting **AWS** IAM policy-evaluation queries with jsonb array elements and multi-stage CTEs — improving query performance 40% and eliminating a class of false-positive findings.
- Owned release engineering for four open-source Go CLIs — unified GitHub Actions **CI/CD** workflows, automated Slack release notifications, and GHCR **Docker** image tagging, improving deployment automation and system resilience.

PROJECTS

TODO / Tasks REST API (Apr 2026)

API-first REST backend in TypeScript with Bun, **Express.js** 5, and SQLite (bun:sqlite) + Zod + jose (JWT). JWT authentication (access, ID, and refresh tokens), RBAC, a prepared-statement CRUD service layer with crypto.randomUUID() IDs, schema-validated controllers with proper REST status codes (201/204/400/404), database migrations, and route-heatmap middleware.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
