SUMMARY

Software Engineer P2 with 3.5+ years of experience and expertise in **distributed systems**, **microservices**, **REST APIs**, and **cloud-native** development on **AWS** and **GCP**. Designed a Go-based **REST** API microservice as part of a greenfield build of Turbot Guardrails, a **cloud-native** SaaS platform, and engineered distributed event-driven pipelines at Turbot HQ, cutting resource-discovery latency 70-90%.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript (ES6+), SQL, Bash

Backend & APIs: REST, gRPC, Microservices, OAuth 2.0 (Auth0), JWT

Distributed Systems & Messaging: Distributed Systems, Event-Driven Architecture, Apache Kafka (consumer groups, DLQs), AWS SNS/SQS

Cloud & Containers: AWS (Lambda, EC2, S3, SecurityHub, GuardDuty), GCP, Docker, Kubernetes (working knowledge; collaborate with platform teams)

Databases & Caching: PostgreSQL, MySQL, DuckDB, MongoDB, Redis (ElastiCache); jsonb, CTEs, query tuning

DevOps & Testing: GitHub Actions, CI/CD, Git, Unit Testing, Integration Testing, Code Review

Core CS: Data Structures & Algorithms, Object-Oriented Design, Low-Level & High-Level System Design, API Design

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Designed and developed an internal **REST** API microservice in Go using the Gin framework as part of a greenfield build of Turbot Guardrails, a **cloud-native** SaaS platform; secured endpoints with OAuth 2.0 authentication via Auth0, containerized with **Docker**, deployed to **AWS** EC2, and served as a gRPC client for several internal **microservices**.
- Built a Kafka-based, event-driven distributed pipeline where consumers asynchronously processed policy-enforcement events in real time; added a dead-letter queue (DLQ) for reliable failure handling and reprocessing.
- Optimized complex PostgreSQL queries powering customer compliance audits — rewriting **AWS** IAM policy-evaluation queries with jsonb array elements and multi-stage CTEs — improving query performance 40% and eliminating a class of false-positive findings.
- Engineered core features for Tailpipe, a CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes; reduced memory use to eliminate out-of-memory failures at scale.
- Resolved a production incident by diagnosing a Go service stuck in a **Kubernetes** CrashLoopBackOff — investigating pod logs and status and collaborating with the platform team to restore service.
- Added multi-distro Linux smoke tests to the GitHub Actions **CI/CD** release pipeline for four open-source Go CLIs, hardening release safety and catching regressions before deployment.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
