SUMMARY

GenAI Engineer with 3.5+ years of experience and expertise in **Python**, **agentic** AI systems, **RAG**, and backend services powering GenAI features. Built a multi-agent AI system and a **RAG**-based agent with a **vector**-store-backed knowledge base at Turbot HQ, cutting resource-discovery latency 70-90% through AI-driven automation that translated business security requirements into production systems.

TECHNICAL SKILLS

Languages: Python, Go, TypeScript, JavaScript (ES6+), SQL, Bash

AI & Agentic Engineering: LLM Application Development, Agentic Workflows, Multi-Agent Systems, Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), OpenAI Agents SDK, Pydantic AI, Vector Storage (AWS S3), Logfire (LLM observability/evaluation), Prompt Engineering

Backend & APIs: REST, gRPC, Microservices, Node.js, Express.js, OAuth 2.0 (Auth0), JWT

Data & Infra: PostgreSQL, MySQL, MongoDB, DuckDB, Redis (Elasticache), Apache Kafka (consumer groups, DLQs), Docker

Cloud Platforms: AWS (Lambda, EC2, S3), Azure, GCP

Frontend: React, TypeScript, Vite

DevOps & Testing: GitHub Actions, CI/CD, Git, Unit Testing, Integration Testing, Code Review

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Designed a multi-agent AI system on the OpenAI Agents SDK — a production **agentic**-orchestration framework — translating a business security requirement into an automated technical solution: **LLM** agents that generate policy commands, validate them in a live test environment, self-correct failures, and score outcomes against an internal evaluation metric.
- Built a **RAG**-based Pydantic AI agent with a knowledge base spanning internal documentation and code, ingested as **embeddings** into AWS S3 **vector** storage; deployed to AWS Lambda and integrated with Slack to translate cross-team business queries into instant, context-aware answers.
- Built the Steampipe Model Context Protocol (MCP) server end to end in **Python**, giving **LLM** agents standardized, real-time access to enterprise cloud and security data — a backend service powering production GenAI features.
- Authored an **LLM**-driven Claude Code skill automating code refactoring, unit test generation, deployment, and PR creation; used it to migrate 35+ Azure cloud-governance modules to event-driven eventing, cutting resource-discovery latency 70-90% — a measurable business-impact win from **agentic** automation.
- Led the AWS SDK for JavaScript v2 to v3 migration across 180+ call sites and 11+ AWS services in production **Node.js** Lambdas; reduced policy-code duplication ~60% via templating, keeping the platform supported past AWS SDK v2 EOL.
- Built a **Kafka**-based, event-driven distributed pipeline where consumers asynchronously processed policy-enforcement events; added a dead-letter queue (DLQ) for reliable failure handling and debugging.
- Owned release engineering for four open-source Go CLIs — unified GitHub Actions **CI/CD** workflows and automated testing, hardening release safety and catching regressions before deployment.

PROJECTS

Lila Tic-Tac-Toe — Real-Time Multiplayer Game (2026)

Built end to end in 4 days: **React 19** + **TypeScript** + Vite frontend on Vercel; Nakama game server (Go core + TS runtime) on Fly.io with PostgreSQL. Server-authoritative anti-cheat over WebSocket transport, mode-aware matchmaking via KV-storage queues, tick-based turn timer, optimistic UI with revert-on-validation-failure, top-10 leaderboard, and reconnect-into-active-match — full-stack, real-time distributed system.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
