SUMMARY

Software Engineer – Backend (Commerce) with 3.5+ years of experience and expertise in **Python**, **Go**, **REST APIs**, and scalable backend services on **PostgreSQL** and cloud platforms. Built a **Python**-based Model Context Protocol server and optimized **PostgreSQL** queries powering enterprise compliance audits at Turbot HQ, improving query performance 40% while cutting resource-discovery latency 70-90% through backend automation.

TECHNICAL SKILLS

Languages: Python, Go, TypeScript, JavaScript (ES6+), SQL, Bash

Backend & APIs: REST, Express.js (Node.js — same category as FastAPI/Flask/Django), gRPC, Node.js, OAuth 2.0 (Auth0), JWT

Databases & Caching: PostgreSQL, MySQL, DuckDB, MongoDB, Redis (ElastiCache), Elasticsearch; jsonb, CTEs, query tuning, indexing

Distributed & Async Processing: Distributed Systems, Event-Driven Architecture, Apache Kafka (consumer groups, DLQs, asynchronous processing), AWS SNS/SQS

Cloud & Containers: AWS (Lambda, EC2, S3), Azure, GCP, Docker, Kubernetes (working knowledge; collaborate with platform teams)

Observability: Datadog, OpenTelemetry (OTel); metrics, logging, tracing, incident triage

DevOps & Testing: GitHub Actions, CI/CD, Git, Unit Testing, Integration Testing, Code Review

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Built the Steampipe Model Context Protocol (MCP) server end to end in **Python**, giving LLM agents standardized, real-time access to enterprise cloud and security data for retrieval and analysis.
- Designed and developed an internal **REST** API microservice in **Go** using the Gin framework as part of a greenfield build of Turbot Guardrails, a cloud-native SaaS platform; secured endpoints with OAuth 2.0 authentication via Auth0, containerized with **Docker**, deployed to **AWS** EC2, and served as a gRPC client for several internal microservices.
- Optimized complex **PostgreSQL** queries powering customer compliance audits — rewriting **AWS** IAM policy-evaluation queries with jsonb array elements and multi-stage CTEs — improving query performance 40% and eliminating a class of false-positive findings.
- Built a Kafka-based, event-driven pipeline where consumers asynchronously processed policy-enforcement events and fired a webhook once a policy was successfully enforced; added a dead-letter queue (DLQ) for reliable failure handling.
- Engineered core features for Tailpipe, a CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes; reduced memory use to eliminate out-of-memory failures.
- Resolved a production incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff — investigating pod logs and status and collaborating with the platform team to restore service.

Kredey (Kredey Innovations Pvt. Ltd.) Remote

2021

Full-Stack Website Developer (Intern)

- Used **Elasticsearch** to support full-text and semantic search over a NoSQL Firebase-backed document-sharing platform.

PROJECTS

TODO / Tasks REST API (Apr 2026)

API-first **REST** backend in TypeScript with Bun, **Express.js** 5, and SQLite (bun:sqlite) + Zod + jose (JWT). JWT authentication (access, ID, and refresh tokens), RBAC, a prepared-statement CRUD service layer with crypto.randomUUID() IDs, schema-validated controllers with proper **REST** status codes (201/204/400/404), database migrations, and route-heatmap middleware.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
