SUMMARY

Senior Software Engineer - Backend & Search (Track A) with 3.5+ years of experience and expertise in **Go, Python, high-throughput distributed systems**, and search/analytical data technologies. Engineered a **Go-based observability** CLI at Turbot HQ processing 1,000+ logs per second and optimized PostgreSQL queries cutting audit-query time 40%, while owning release engineering across four open-source products (9,300+ GitHub stars).

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript (ES6+), SQL, Bash

Search & Analytical Data: Elasticsearch (full-text & semantic search), DuckDB (columnar/analytical engine), Parquet

Backend & APIs: REST, gRPC, Microservices, OAuth 2.0 (Auth0), JWT, Node.js, Express.js

Distributed Systems & Messaging: Distributed Systems, Event-Driven Architecture, Apache Kafka (consumer groups, DLQs), AWS SNS/SQS

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis (ElastiCache); jsonb, CTEs, query tuning, indexing

Cloud & Containers: AWS (Lambda, EC2, S3), Azure, GCP, Docker, Kubernetes (working knowledge; collaborate with platform teams)

Observability & DevOps: Datadog, OpenTelemetry (OTel), GitHub Actions, CI/CD, Git, Unit Testing, Integration Testing, Code Review

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Engineered core features for Tailpipe, a **Go-based observability** CLI on **DuckDB** (a columnar analytical engine) + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes; reduced memory use to eliminate out-of-memory failures at scale.
- Designed and developed an internal REST API microservice in **Go** using the Gin framework as part of a greenfield build of Turbot Guardrails, a cloud-native SaaS platform; secured endpoints with OAuth 2.0 authentication via Auth0, containerized with **Docker**, deployed to **AWS** EC2, and served as a gRPC client for several internal **high-throughput** microservices.
- Built a **Kafka**-based, fault-tolerant, event-driven distributed pipeline where consumers asynchronously processed policy-enforcement events; added a dead-letter queue (DLQ) for reliable failure handling and reprocessing.
- Optimized complex PostgreSQL queries powering customer compliance audits — rewriting **AWS** IAM policy-evaluation queries with jsonb array elements and multi-stage CTEs — improving query performance 40% and eliminating a class of false-positive findings.
- Owned release engineering end-to-end for four open-source **Go** CLIs (Steampipe, Powerpipe, Flowpipe, Tailpipe) — unified GitHub Actions **CI/CD** workflows, automated Slack release notifications, and GHCR **Docker** image tagging — establishing engineering best practices across the platform.
- Resolved a production incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff — investigating pod logs and status and collaborating with the platform team to restore service.
- Mentored teammates on adopting AI-assisted engineering tools (Claude Code, Cursor) into their daily workflows.

Kredey (Kredey Innovations Pvt. Ltd.) Remote

2021

Full-Stack Website Developer (Intern)

- Used **Elasticsearch** to support full-text and semantic search over a NoSQL Firebase-backed document-sharing platform.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
