SUMMARY

Backend Software Engineer with 3.5+ years of experience building containerized, **cloud-native** services in **Go** and **Python**, with hands-on **Docker**, **Kubernetes**, and **AWS/Azure** experience. Diagnosed and resolved a production **Kubernetes** CrashLoopBackOff incident and cut **Azure** cloud-governance resource-discovery latency 70–90% by migrating 35+ modules to event-driven architecture at Turbot HQ.

TECHNICAL SKILLS

Languages: Go (Golang), Python, TypeScript, JavaScript (ES6+), SQL, Bash, HCL

Backend & APIs: Microservices, Event-Driven Architecture, Distributed Systems, REST, gRPC, OAuth 2.0 (Auth0), Node.js, Gin

Messaging & Streaming: Apache Kafka (consumer groups, DLQs), AWS SNS/SQS, AWS EventBridge, Azure Event Grid

Cloud & Serverless: AWS (Lambda, EC2, S3, SecurityHub, GuardDuty), Azure, GCP, OCI

IaC & DevOps: Docker, Containers, Kubernetes (working knowledge; collaborate with platform teams), Terraform, OpenTofu, HCL, GHCR, GitHub Actions, Jenkins, Git

Observability: Datadog, OpenTelemetry (OTel), Logfire; metrics, logging, tracing, incident triage

Testing & Quality: Unit Testing, Integration Testing, Automated CI Testing, Code Review

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Designed and developed an internal **REST** API microservice in **Go** using the Gin framework as part of a greenfield build of Turbot Guardrails, a **cloud-native** Preventive Security Posture Management (PSPM) SaaS product; secured endpoints with OAuth 2.0 authentication via Auth0, containerized with **Docker**, deployed to **AWS** EC2, and served as a gRPC client for several internal **microservices**.
- Migrated 35+ **Azure** cloud-governance modules from polling to push-based eventing via **Azure** Event Grid, cutting resource-discovery latency 70–90% and eliminating recurring **Azure** API throttling.
- Built a Kafka-based, fire-and-forget event-driven pipeline for Turbot Guardrails, where consumers asynchronously processed policy-enforcement events and fired a webhook once a policy was successfully enforced against a resource; added a dead-letter queue (DLQ) to capture recurring failures for manual investigation and debugging.
- Engineered core features for Tailpipe, a **Go**-based **observability**/SIEM CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes to DuckDB; authored 11 **AWS** log-source tables (CloudTrail, GuardDuty, SecurityHub, VPC flow, WAF, and more) and 25+ pre-built security detections.
- Resolved a production incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff, collaborating with the platform team to investigate pod logs and status and restore service.
- Owned release engineering for four open-source **Go** CLIs (Steampipe, Powerpipe, Flowpipe, Tailpipe) — unified GitHub Actions release/version workflows and GHCR **Docker** image tagging, and added multi-distro Linux smoke tests (CentOS, Ubuntu ARM64, macOS) to the release pipeline, hardening release safety across distributions.

Kredey (Kredey Innovations Pvt. Ltd.) Remote

2021

Full-Stack Website Developer (Intern)

- Used **Elasticsearch** to support full-text and semantic search over a NoSQL Firebase-backed document-sharing platform.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
