SUMMARY

Advanced Software Engineer with 3.5+ years designing, operating, and troubleshooting distributed, **event-driven** cloud systems across **AWS, Azure, and GCP** — hands-on with **Terraform/HCL** infrastructure-as-code, **Docker, Kubernetes, GitHub Actions** CI/CD, and **Datadog/OpenTelemetry** monitoring. Cut resource-discovery latency 70–90% by migrating 35+ **Azure** governance modules to an **event-driven** architecture at Turbot HQ, one of 120+ merged **pull requests** across Turbot's 9,300 ★ open-source suite.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript (ES6+), SQL, Bash, HCL

IaC & DevOps: Terraform, OpenTofu, HCL, Docker, Kubernetes (working knowledge; collaborate with platform teams), GHCR, GitHub Actions, Git

Cloud & Serverless: AWS (Lambda, EC2, RDS, S3, SecurityHub, GuardDuty, ControlTower, Shield, X-Ray, EFS), Azure, GCP, OCI, AliCloud

Messaging & Streaming: Apache Kafka (consumer groups, DLQs), AWS SNS/SQS, AWS EventBridge, Azure Event Grid

Observability: Datadog, OpenTelemetry (OTel), Logfire; metrics, logging, tracing, incident triage

Security & Compliance: CIS (AWS, Azure, GCP, M365, GitHub, Google Workspace), NIST (incl. 800-171 Rev 2), HIPAA, PCI DSS v4, SOC 2, FedRAMP, AWS Foundational Security Best Practices; IAM, RBAC, cloud security policies, CMDB, SIEM

Backend & APIs: Microservices, Event-Driven Architecture, Distributed Systems, Serverless, REST, gRPC, OAuth 2.0 (Auth0), JWT

Databases & SQL: PostgreSQL, MySQL, MongoDB, DuckDB; jsonb, CTEs, query tuning, indexing, transactions, database migrations

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Resolved a production incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff, collaborating with the platform team on system reliability and uptime to investigate pod logs and status and restore service.
- Authored an LLM-driven Claude Code skill automating code refactoring, unit test generation, deployment, **Terraform**-driven integration testing, and PR creation; used it to migrate 35+ **Azure** cloud-governance modules to an **event-driven** architecture via **Azure** Event Grid (from polling), cutting resource-discovery latency 70–90% and eliminating recurring **Azure** API throttling.
- Built a **Kafka**-based, fire-and-forget **event-driven** pipeline for Turbot Guardrails, where consumers asynchronously processed policy-enforcement events and fired a webhook once a policy was successfully enforced against a resource; added a dead-letter queue (DLQ) to capture recurring failures for manual investigation and debugging.
- Owned release engineering for four open-source **Go** CLIs (Steampipe, Powerpipe, Flowpipe, Tailpipe) — added multi-distro **Linux** smoke tests to the **GitHub Actions** release pipeline and unified release/version workflows, automated Slack notifications, and GHCR **Docker** image tagging, improving release safety, repeatability, and traceability — all shipped through peer **code review** via GitHub **pull requests**.
- Authored multi-cloud compliance modules in **HCL** + **SQL** covering 1,000+ resource checks across **CIS** (AWS v4–v6, **Azure** v2.1–v4.0, **GCP** v3–v4, Microsoft 365, Google Workspace, GitHub), **NIST**, **HIPAA**, **PCI DSS** v4, **SOC 2**, and **FedRAMP** frameworks — used by enterprise customers in finance, healthcare, and government — cutting enterprise compliance-audit time 50%.

PROJECTS

SLA Tracking Dashboard for an Open-Source Tools Team

651 lines of dashboard config (**HCL** + **SQL**) for a public OSS repo: per-repo SLA-tracking status cards across 8 repositories (Awaiting Initial Response, Needs Triage, Awaiting Author Feedback, Stale Issues, Total Age) with threshold-coded indicators, giving the team ongoing visibility into service-level performance. Lateral-join SQL against the Steampipe GitHub plugin tables detects zero-org-comment issues — replacing manual repo-by-repo triage with a single dashboard.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
