SUMMARY

Backend Software Engineer with 3.5+ years designing, building, and scaling backend services and **distributed systems** in **Go**, with strong fundamentals in **Data Structures & Algorithms**, **Object-Oriented** Design, and **REST/gRPC microservices**. Core contributor to four open-source **Go** platforms (9,300+ GitHub stars, 120+ merged PRs) at Turbot HQ, where I engineered core features for a **Go**-based, data-intensive **observability** CLI that lifted log-processing throughput 30% to 1,000+ events per second while eliminating out-of-memory failures.

TECHNICAL SKILLS

Languages: Go (Golang), Python, TypeScript, JavaScript (ES6+), SQL, Bash

Backend & APIs: Microservices, Distributed Systems, Event-Driven Architecture, Concurrent/high-throughput Go services, REST, gRPC, WebSockets, OAuth 2.0 (Auth0), Node.js, Gin

Messaging & Streaming: Apache Kafka (consumer groups, DLQs), AWS SNS/SQS, AWS EventBridge

Databases & SQL: PostgreSQL, MongoDB, DuckDB, SQLite, Redis; query tuning, indexing, transactions, database migrations

Cloud & Serverless: AWS (Lambda, EC2, S3), Azure, GCP

IaC & DevOps: Docker, Kubernetes (working knowledge), GitHub Actions, Git

Observability: Datadog, OpenTelemetry (OTel); metrics, logging, tracing, incident triage

Core CS: Data Structures & Algorithms, Object-Oriented Design, Low-Level & High-Level System Design, API Design

Testing & Quality: Unit Testing, Integration Testing, Automated CI Testing, Code Review

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Multi-cloud security, governance, and compliance software; makers of the open-source *Steampipe* / *Powerpipe* / *Flowpipe* / *Tailpipe* suite and the commercial Turbot Guardrails PSPM platform. Remote-first.

Software Engineer I

- Designed and built an internal **REST** API microservice in **Go** using the Gin framework as part of a greenfield build of Turbot Guardrails, a SaaS platform; secured endpoints with OAuth 2.0 (Auth0), containerized with Docker, deployed to AWS EC2, and served as a **gRPC** client for several internal **microservices**.
- Built a Kafka-based, **event-driven** pipeline in **Go** where distributed consumers asynchronously processed policy-enforcement events and fired a webhook once processing completed; added a dead-letter queue (DLQ) for recurring-failure investigation and **debugging**.
- Engineered core features for Tailpipe, a **Go**-based, data-intensive **observability** CLI built on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ events per second by chunking and batching file reads and streaming writes; reduced memory use to eliminate out-of-memory failures and enable incremental updates.
- Authored 11 data-source tables in **Go** for Tailpipe (CloudTrail, GuardDuty, SecurityHub, ALB/NLB/CLB/ELB, S3, VPC flow, WAF, Network Firewall) and 25+ pre-built detections; designed standardized exit-code handling and a cross-platform smoke-test pipeline (CentOS, Ubuntu ARM64, macOS).
- Resolved a production incident by troubleshooting a **Go** service stuck in a Kubernetes CrashLoopBackOff, collaborating with the platform team to investigate pod logs and status and restore service.
- Owned CI/CD release engineering for four open-source **Go** CLIs (*Steampipe*, *Powerpipe*, *Flowpipe*, *Tailpipe*) — unified GitHub Actions release pipelines with automated multi-distro Linux smoke tests, hardening release safety and catching regressions before deployment; shipped HCL function-call support across two of the CLIs by extending a shared **Go** library.

PROJECTS

Lila Tic-Tac-Toe — Real-Time Multiplayer Game (2026)

Built end to end in 4 days. React 19 + TypeScript + Vite on Vercel; Nakama game server (**Go** core + TS runtime) on Fly.io with PostgreSQL. Server-authoritative anti-cheat over WebSocket transport, mode-aware matchmaking via KV-storage queues, tick-based turn timer, and reconnect-into-active-match — a distributed, stateful backend service under real-time constraints.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, Data Structures and Algorithms, DBMS, Low-Level Design, High-Level Design
