## SUMMARY

Backend software engineer with 3.5+ years building secure, scalable microservices in **Go**, **Python**, and **Node.js**, with hands-on **OAuth 2.0** and **JWT**-based authentication work and heavy day-to-day use of AI-assisted development tools (**Claude Code**, **Cursor**) to accelerate delivery. Authored an LLM-driven **Claude Code** skill automating refactoring, test generation, and deployment for Turbot HQ, migrating 35+ modules to an event-driven architecture and cutting resource-discovery latency 70–90%.

## TECHNICAL SKILLS

**Languages:** Go, Python, TypeScript, JavaScript (ES6+), SQL, Bash

**Backend & APIs:** Microservices, Event-Driven Architecture, Distributed Systems, REST, gRPC, WebSockets, OAuth 2.0 (Auth0), JWT, IAM, Node.js, Express.js, Gin, Bun

**AI-Assisted Development:** Claude Code, Cursor, Codex, LLM Application Development, Agentic Workflows, Model Context Protocol (MCP)

**Cloud & DevOps:** AWS (Lambda, EC2, RDS, S3), Azure, GCP, Docker, Kubernetes (working knowledge; collaborate with platform teams), Terraform, OpenTofu, HCL, GitHub Actions, CI/CD, Git

**Databases & SQL:** PostgreSQL, MySQL, MongoDB, DuckDB, SQLite, Redis; jsonb, CTEs, indexing, transactions, database migrations

**Testing & Quality:** Unit Testing, Integration Testing, Jest, Mocha, Automated CI Testing, Code Review

## WORK EXPERIENCE

**Turbot HQ, Inc.** Remote

August 2022 – April 2026

Multi-cloud security, governance, and compliance software; makers of the open-source Steampipe / Powerpipe / Flowpipe / Tailpipe suite and the commercial Turbot Guardrails PSPM platform. Remote-first.

### Software Engineer I

- Designed and developed an internal REST API microservice in **Go** using the Gin framework as part of a greenfield build of Turbot Guardrails, a Preventive Security Posture Management (PSPM) SaaS product; secured endpoints with **OAuth 2.0** authentication via Auth0, containerized with **Docker**, deployed to **AWS** EC2, and served as a gRPC client for several internal microservices.
- Led the **AWS** SDK for JavaScript v2 to v3 migration across 180+ call sites and 11+ **AWS** services in production **Node.js** Lambdas, refactoring discovery, configuration-sync, tagging, and resource-cleanup workflows; reduced policy-code duplication ~60% via Nunjucks templating.
- Authored an LLM-driven **Claude Code** skill automating code refactoring, unit test generation, deployment, and **Terraform**-driven integration testing to accelerate feature velocity; used it to migrate 35+ Azure cloud-governance modules from polling to push-based eventing via Azure Event Grid, cutting resource-discovery latency 70–90% and eliminating recurring API throttling.
- Built a Kafka-based, fire-and-forget event-driven pipeline for Turbot Guardrails, where consumers asynchronously processed policy-enforcement events and fired a webhook once a policy was enforced; added a dead-letter queue (DLQ) to capture recurring failures for investigation.
- Optimized complex PostgreSQL queries powering customer compliance audits — rewriting **AWS IAM** policy-evaluation queries with jsonb array elements and multi-stage CTEs — improving query performance 40% and eliminating a class of false-positive findings.
- Resolved a production incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff, collaborating with the platform team to restore service.

## PROJECTS

### TODO / Tasks REST API (Apr 2026)

API-first REST backend in TypeScript with Bun, Express.js 5, and SQLite + Zod + jose (**JWT**). **JWT** authentication (access, ID, and refresh tokens), RBAC, a prepared-statement CRUD service layer, schema-validated controllers with proper REST status codes, and database migrations.

## EDUCATION

**University of Engineering & Management (UEM)** Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28
