SUMMARY

Backend software engineer with 3.5+ years building **microservices** in **Go** (Golang) and **Node.js** across **AWS**, with hands-on experience in cloud security **policy enforcement**, compliance automation, and **CI/CD**. Built a Kafka-based policy-enforcement pipeline and 1,000+ multi-cloud compliance checks across **CIS**, **NIST**, **HIPAA**, and **PCI DSS** frameworks for Turbot HQ, cutting enterprise compliance-audit time 50%.

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Multi-cloud security, governance, and compliance software; makers of the open-source Steampipe / Powerpipe / Flowpipe / Tailpipe suite and the commercial Turbot Guardrails PSPM platform. Remote-first.

Software Engineer I

- Built a Kafka-based, fire-and-forget event-driven pipeline for Turbot Guardrails, a cloud security policy-enforcement platform, where consumers asynchronously processed policy-enforcement events and fired a webhook once a policy was successfully enforced against a cloud resource; added a dead-letter queue (DLQ) to capture recurring failures for investigation.
- Authored multi-cloud compliance modules in HCL + SQL covering 1,000+ resource checks across **CIS** (AWS, Azure, GCP, Microsoft 365, GitHub), **NIST**, **HIPAA**, **PCI DSS v4**, **SOC 2**, and **FedRAMP** frameworks — used by enterprise customers in finance, healthcare, and government for cloud data visibility and compliance — cutting enterprise compliance-audit time 50%.
- Engineered core features for Tailpipe, a **Go**-based observability/**SIEM** CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes; reduced memory use to eliminate out-of-memory failures.
- Designed and developed an internal REST API microservice in **Go** (Golang) using the Gin framework as part of a greenfield build of Turbot Guardrails, a Preventive Security Posture Management (PSPM) SaaS product; secured endpoints with OAuth 2.0 via Auth0, containerized with Docker, deployed to **AWS** EC2, and served as a gRPC client for several internal **microservices**.
- Led the **AWS** SDK for JavaScript v2 to v3 migration across 180+ call sites and 11+ **AWS** services in production **Node.js** Lambdas, refactoring discovery, configuration-sync, tagging, and resource-cleanup workflows; reduced policy-code duplication ~60% via Nunjucks templating and resolved recurring **AWS** API throttling issues.
- Owned release engineering for four open-source **Go** CLIs (Steampipe, Powerpipe, Flowpipe, Tailpipe) — unified **GitHub Actions** **CI/CD** release workflows with automated quality gates and multi-distro Linux smoke tests, hardening release safety before deployment.

PROJECTS

CIS Benchmark → Compliance Dashboard Generator

Python CLI that automates compliance-dashboard authoring for a multi-cloud governance product. Ingests **CIS** benchmark XLSX workbooks (AWS, Azure) and emits ready-to-deploy HCL dashboard config plus markdown docs for cloud security visibility. OOP resource model, custom HCL pretty-printer, openpyxl + pandas, distributed as a pip-installable package.
