SUMMARY

Application Engineer (AI Automation) with 3.5+ years of experience and expertise in **Python**, **MCP** server architecture, **RAG** systems, and **agentic AI** orchestration. Designed and built the Steampipe **Model Context Protocol (MCP)** server end to end in **Python** at Turbot HQ, giving LLM agents standardized, real-time access to enterprise cloud data, and built a **multi-agent** system with self-correcting, cross-agent validation.

TECHNICAL SKILLS

AI & Agentic Engineering: Model Context Protocol (MCP) server architecture, Agentic Workflows, Multi-Agent Systems (agent-to-agent validation), Retrieval-Augmented Generation (RAG), OpenAI Agents SDK, Pydantic AI, Vector Storage (AWS S3), Prompt Engineering

Languages: Python, TypeScript, JavaScript (ES6+), Go, SQL, Bash

Backend & Integration: REST API design & consumption, OAuth 2.0 (Auth0), JWT, gRPC, Microservices, Node.js

Cloud & Containers: AWS (Lambda, EC2, S3), Azure, GCP, Docker, Kubernetes (working knowledge; collaborate with platform teams)

DevOps & Testing: GitHub Actions, CI/CD, Git, Unit Testing, Code Review

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Designed and built the Steampipe **Model Context Protocol (MCP)** server end to end in **Python** — architecting the protocol-compliant interface from scratch — giving **AI** agents standardized, real-time access to enterprise cloud and security data.
- Designed a **multi-agent AI** system on the OpenAI Agents SDK where agents generate cloud policy actions, validate them against each other in a live environment, self-correct failures, and score outcomes against an internal metric — an **agent-to-agent** validation loop.
- Built a **RAG**-based Pydantic **AI agent** with a knowledge base ingested into AWS S3 **vector** storage — the same **vector**-search category as Pinecone/Weaviate — deployed to AWS Lambda and integrated with Slack to give business teams autonomous, self-serve access to internal knowledge.
- Designed and developed an internal **REST** API microservice in Go using the Gin framework, secured with **OAuth 2.0** authentication via Auth0 — deep hands-on with authenticated **REST** integration patterns — containerized with Docker and deployed to AWS EC2, serving as a gRPC client for several internal microservices.
- Authored an LLM-driven Claude Code skill automating code refactoring, test generation, deployment, and PR creation, then used it to migrate 35+ Azure cloud-governance modules to event-driven eventing, cutting resource-discovery latency 70-90% — **AI** automation applied directly to a real integration problem.
- Mentored teammates on adopting **AI**-assisted engineering tools (Claude Code, Cursor) into their daily workflows.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
