SUMMARY

Full Stack Engineer with 3.5+ years of experience and expertise in **Node.js**, **TypeScript**, **REST APIs**, and scalable **microservices** on **PostgreSQL** and cloud-native infrastructure. Led the AWS SDK for JavaScript v2 to v3 migration across 180+ call sites and 11+ AWS services in production **Node.js** Lambdas at Turbot HQ, cutting policy-code duplication ~60%, and optimized **PostgreSQL** queries improving audit performance 40%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Go, Python, SQL, Bash

Backend & APIs: REST, Express.js, gRPC, Microservices, Node.js, OAuth 2.0 (Auth0), JWT

Distributed Systems & Messaging: Distributed Systems, Event-Driven Architecture, Apache Kafka (consumer groups, DLQs), AWS SNS/SQS

Databases: PostgreSQL, MySQL, MongoDB, DuckDB; jsonb, CTEs, query tuning, schema design

Cloud & Containers: AWS (Lambda, EC2, S3), Azure, GCP, Docker, Kubernetes (working knowledge; collaborate with platform teams)

IaC & DevOps: Terraform, GitHub Actions, CI/CD, Git

Observability & Testing: Datadog, OpenTelemetry (OTel), Unit Testing, Integration Testing, Code Review

Core CS: Data Structures & Algorithms, Object-Oriented Design, Low-Level & High-Level System Design, API Design

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Led the AWS SDK for JavaScript v2 to v3 migration across 180+ call sites and 11+ AWS services in production **Node.js** Lambdas; reduced policy-code duplication ~60% via templating, keeping the platform supported past AWS SDK v2 EOL.
- Designed and developed an internal **REST** API microservice in Go using the Gin framework as part of a greenfield build of Turbot Guardrails, an enterprise **SaaS** platform; secured endpoints with OAuth 2.0 authentication via Auth0, containerized with **Docker**, deployed to AWS EC2, and served as a gRPC client for several internal distributed **microservices**.
- Optimized complex **PostgreSQL** queries powering customer compliance audits — rewriting AWS IAM policy-evaluation queries with jsonb array elements and multi-stage CTEs — improving query performance 40% and eliminating a class of false-positive findings.
- Built a **Kafka**-based, event-driven distributed pipeline where consumers asynchronously processed policy-enforcement events; added a dead-letter queue (DLQ) for reliable failure handling and reprocessing.
- Authored an LLM-driven Claude Code skill automating code refactoring, unit test generation, deployment, **Terraform**-driven integration testing, and PR creation; used it to migrate 35+ Azure cloud-governance modules to event-driven eventing, cutting resource-discovery latency 70-90%.
- Resolved a production incident by diagnosing a Go service stuck in a Kubernetes CrashLoopBackOff — investigating pod logs and status and collaborating with the platform team to restore service.

PROJECTS

TODO / Tasks REST API (Apr 2026)

API-first **REST** backend in **TypeScript** with Bun, **Express.js** 5, and SQLite (bun:sqlite) + Zod + jose (JWT). JWT authentication (access, ID, and refresh tokens), RBAC, a prepared-statement CRUD service layer with crypto.randomUUID() IDs, schema-validated controllers with proper **REST** status codes (201/204/400/404), database migrations, and route-heatmap middleware.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
