SUMMARY

Member of Technical Staff, Backend with 3.5+ years of experience and expertise in **Go**, **cloud-native microservices**, and **distributed systems** architecture. Authored 11 AWS log-source tables and shipped core **Go** features for Tailpipe at Turbot HQ, lifting log-processing throughput 30% to 1,000+ events per second at **scale**.

TECHNICAL SKILLS

Languages: Go (Golang), Python, TypeScript, JavaScript (ES6+), SQL, Bash

Backend & Cloud-Native: REST, gRPC, Microservices, Distributed Systems, Event-Driven Architecture, OAuth 2.0 (Auth0), JWT

Messaging: Apache Kafka (consumer groups, DLQs), AWS SNS/SQS

Cloud & Containers: AWS (Lambda, EC2, S3, SecurityHub, GuardDuty), Azure, GCP, Docker, Kubernetes (working knowledge; collaborate with platform teams)

AI Tooling: Claude Code, Cursor, Codex (AI-assisted engineering)

Core CS & Testing: Data Structures & Algorithms, Object-Oriented Design, System Design, Unit Testing, Integration Testing, Code Review

DevOps: GitHub Actions, CI/CD, Git

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Engineered core features for Tailpipe, a **Go**-based observability CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ logs per second by chunking and batching file reads and streaming writes at **scale**; reduced memory use to eliminate out-of-memory failures.
- Designed and developed an internal REST API microservice in **Go** using the Gin framework as part of a greenfield build of Turbot Guardrails, a **cloud-native** SaaS platform; secured endpoints with OAuth 2.0 authentication via Auth0, containerized with Docker, deployed to AWS EC2, and served as a gRPC client for several internal **microservices**.
- Authored 11 AWS log-source tables for Tailpipe in **Go** and 25+ pre-built security detections; designed standardized exit-code handling and a cross-platform smoke-test pipeline (CentOS, Ubuntu ARM64, macOS) for quality assurance across environments.
- Built a Kafka-based, event-driven distributed pipeline where consumers asynchronously processed policy-enforcement events; added a dead-letter queue (DLQ) for reliable failure handling and debugging.
- Resolved a production incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff — investigating pod logs and status and collaborating with the platform team to restore service.
- Owned release engineering end-to-end for four open-source **Go** CLIs — unified GitHub Actions **CI/CD** workflows, automated smoke tests across Linux distributions, and GHCR Docker image tagging.
- Authored an LLM-driven Claude Code skill automating code refactoring, unit test generation, deployment, and PR creation — using **AI tooling** as part of my daily engineering workflow; used it to migrate 35+ Azure cloud-governance modules, cutting resource-discovery latency 70-90%.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
