SUMMARY

Software Engineer, Core Platform with 3.5+ years of **production** engineering experience and expertise across backend, infra, and data — **Go**, **Python**, **distributed systems**, and **AI-agent orchestration**. Built a **production multi-agent** orchestration system and the Steampipe MCP server from scratch at Turbot HQ (9,300+ GitHub stars, 120+ merged PRs), and lifted a **Go**-based CLI's throughput 30% to 1,000+ events per second.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript (ES6+), SQL, Bash

AI & Agentic Tooling: LLM Application Development, Agentic Workflows, Multi-Agent Systems (Agent Orchestration), Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), OpenAI Agents SDK, Pydantic AI, Claude Code, Cursor, Codex

Backend & APIs: REST, gRPC, Microservices, Event-Driven Architecture, Distributed Systems, OAuth 2.0 (Auth0), JWT

Databases & Data: PostgreSQL, MySQL, DuckDB, MongoDB; jsonb, CTEs, query tuning, schema design

Infra & DevOps: Docker, Kubernetes (working knowledge; collaborate with platform teams), AWS, Azure, GCP, GitHub Actions, CI/CD, Terraform

Observability: Datadog, OpenTelemetry (OTel); metrics, logging, tracing, incident triage

Frontend: React, TypeScript, Vite

Core CS & Testing: Data Structures & Algorithms, Object-Oriented Design, System Design, Unit Testing, Integration Testing, Code Review

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Designed and built a **multi-agent** orchestration system on the OpenAI Agents SDK end to end — a 0→1 build — where LLM agents generate cloud policy commands, validate them in a live environment, self-correct failures, and score outcomes against an internal metric.
- Built the Steampipe Model Context Protocol (MCP) server end to end in **Python**, designing the interface from scratch to give LLM agents standardized, real-time access to enterprise cloud and security data.
- Authored an LLM-driven **Claude** Code skill automating code refactoring, test generation, deployment, and PR creation — using **AI** as leverage to automate my own workflow; used it to migrate 35+ Azure modules to event-driven eventing, cutting resource-discovery latency 70-90%.
- Owned the design, build, testing, and deployment of an internal **REST API** microservice in **Go** (Gin) as part of a greenfield build of Turbot Guardrails; secured with OAuth 2.0 via Auth0, containerized with Docker, deployed to **AWS** EC2, and served as a gRPC client for internal microservices.
- Engineered core features for Tailpipe, a **Go** CLI on DuckDB + Parquet, lifting log-processing throughput 30% to 1,000+ events per second by chunking and batching file reads and streaming writes; reduced memory use to eliminate out-of-memory failures at **scale**.
- Optimized complex PostgreSQL queries powering customer compliance audits — rewriting **AWS** IAM policy-evaluation queries with jsonb array elements and multi-stage CTEs — improving query performance 40% and eliminating a class of false-positive findings.
- Resolved a **production** incident by diagnosing a **Go** service stuck in a **Kubernetes** CrashLoopBackOff — investigating pod logs and status and collaborating with the platform team to restore service.
- Owned release engineering end-to-end for four open-source **Go** CLIs — unified GitHub Actions CI/CD workflows and GHCR Docker image tagging, establishing engineering best practices across the platform.

PROJECTS

Lila Tic-Tac-Toe — Real-Time Multiplayer Game (2026)

Side project built end to end in 4 days, no spec, self-directed: React 19 + TypeScript + Vite frontend on Vercel; Nakama game server (**Go** core + TS runtime) on Fly.io with PostgreSQL. Server-authoritative anti-cheat over WebSocket transport, mode-aware matchmaking via KV-storage queues, tick-based turn timer, optimistic UI with revert-on-validation-failure, top-10 leaderboard, and reconnect-into-active-match.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
