SUMMARY

Accomplished Full Stack Developer with 3.5+ years building **event-driven microservices** and RESTful APIs in **Go**, **Node.js**, and **TypeScript**, with **React** front-ends and **PostgreSQL** across **AWS**, **Azure**, and **GCP**. Core contributor to four open-source products at Turbot (120+ merged PRs, 9,300+ GitHub stars) — built a **Go/Gin REST** microservice and a **Kafka-based event-driven** pipeline, and cut resource-discovery latency 70–90%.

TECHNICAL SKILLS

Languages: Go (Golang), TypeScript, JavaScript (ES6+), Python, SQL, Java, Bash, HCL

Backend & APIs: RESTful APIs, Microservices, Event-Driven Architecture, Distributed Systems, gRPC, GraphQL, WebSockets, Serverless, OAuth 2.0 (Auth0), JWT, Node.js, Express.js, Gin, Bun

Frontend: React (React.js), TypeScript, Vite, MUI, Three.js, HTML, CSS

Databases & Storage: PostgreSQL, MySQL, SQL & NoSQL, MongoDB, Redis (ElasticCache), Elasticsearch, DuckDB, SQLite, Firebase/Firestore; jsonb, CTEs, indexing, query tuning, transactions, database migrations

Messaging & Streaming: Apache Kafka (consumer groups, DLQs), AWS SNS/SQS, AWS EventBridge, Azure Event Grid

Cloud, DevOps & Observability: AWS (Lambda, EC2, RDS, S3), GCP, Azure, OCI, Firebase; Docker, Kubernetes (working knowledge), GitHub Actions, Terraform, OpenTofu, Git, Jira, Vercel, Fly.io; Datadog, OpenTelemetry (OTel)

Testing & Quality: Unit, Integration & End-to-End Testing, Jest, Mocha, Automated CI Testing, Code Review

Core CS & AI: Data Structures & Algorithms, Object-Oriented Design, Low-Level & High-Level System Design, API Design, LLM/Agentic Workflows, Model Context Protocol (MCP)

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Designed and built an internal **RESTful API** microservice in **Go** (Gin framework) for Turbot Guardrails; secured endpoints with **OAuth 2.0** via Auth0, containerized with **Docker**, deployed to **AWS EC2**, and served as a **gRPC** client for several internal **microservices**.
- Built a **Kafka-based**, fire-and-forget **event-driven** pipeline whose consumers asynchronously processed policy-enforcement events and fired a webhook on success; added a dead-letter queue (DLQ) to capture recurring failures, hardening reliability.
- Core contributor across four open-source **Go** products (Steampipe, Powerpipe, Flowpipe, Tailpipe) — 120+ merged PRs, 9,300+ GitHub stars; engineered Tailpipe features on DuckDB + Parquet that lifted log-processing throughput 30% to 1,000+ logs per second and eliminated out-of-memory failures.
- Led the **AWS SDK for JavaScript** v2→v3 migration across 180+ call sites and 11+ **AWS** services in production **Node.js** Lambdas, refactoring resource-discovery, configuration-sync, tagging, and cleanup workflows; cut policy-code duplication ~60% via Nunjucks templating and modular imports, keeping the platform supported past **AWS SDK v2** EOL and unblocking the **Node.js** runtime upgrade.
- Optimized complex **PostgreSQL** queries powering customer compliance audits — using jsonb array elements, multi-stage CTEs, and condition-aware filters — improving query performance 40% (3 min → 1.5 min across 10,000+ resources) and eliminating a class of false-positive findings.
- Built the Steampipe Model Context Protocol (MCP) server end to end in **Python**, giving LLM agents standardized, real-time access to enterprise cloud data — proactively adopting emerging tooling to extend the platform.

Trisetra, Inc. Remote

February 2022 – June 2022

Frontend Software Developer Intern (SDE Intern)

- Built **React** front-end features for a 3D product-visualization SaaS — led a 60+ file user-upload workflow redesign, drove a responsive-design overhaul across mobile/desktop breakpoints, and contributed to a **React 17→19** and **MUI 4→7** migration.
- Authored a 3D-geometry library (footprint/inner-polygon extraction) powering the furniture-placement feature, and introduced the repo's first Mocha unit-test suite with real 3D-asset fixtures.

Kredey

2021

Full-Stack Website Developer (Intern)

- Used **Elasticsearch** for full-text and semantic search over a **NoSQL** Firebase-backed document-sharing platform built with **React**.

PROJECTS

Lila Tic-Tac-Toe — Real-Time Multiplayer Game (2026)

Full-stack real-time multiplayer game built end to end in 4 days: **React 19** + **TypeScript** + Vite front-end on Vercel; a **Go**-based Nakama game server on Fly.io with **PostgreSQL**. Server-authoritative anti-cheat over **WebSocket**, mode-aware matchmaking, optimistic UI, a top-10 leaderboard, and reconnect-into-active-match.

[repo/live](#)

TODO / Tasks REST API *(Apr 2026)*

API-first **REST** backend in **TypeScript** (Bun, Express.js 5, SQLite, Zod, JWT): access/refresh-token auth, RBAC, a prepared-statement CRUD layer, schema-validated controllers with correct **REST** status codes, and database migrations.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Low-Level & High-Level Design, Shell Scripting in Linux
