SUMMARY

Accomplished **Backend Engineer** (Golang) with 3.5+ years of experience and expertise in **Go, Python, SQL, REST APIs**, and **LLM-powered workflows**. At Turbot, achieved 120+ merged pull requests across four open-source products (9,300+ GitHub stars) while shipping production **Go/Python** systems including high-throughput **data pipelines** processing 1,000+ logs/second.

TECHNICAL SKILLS

Languages: Go, Python, SQL, TypeScript, JavaScript, Bash

Backend & APIs: REST APIs, Microservices, Event-Driven Architecture, Distributed Systems, gRPC, OAuth 2.0 (Auth0), JWT, Gin, Express.js

AI & LLM Engineering: LLM Workflows, Model Context Protocol (MCP), OpenAI Agents SDK, Pydantic AI, Retrieval-Augmented Generation (RAG), Multi-Agent Systems

Data & Storage: PostgreSQL, DuckDB, SQLite, Parquet, Firebase/Firestore, S3 Vector Storage, Query Tuning, CTEs, jsonb

Cloud & DevOps: AWS (Lambda, EC2, S3), Docker, GitHub Actions, Apache Kafka, Dead-Letter Queues (DLQ)

Core Engineering: System Design, Debugging, API Design, Data Structures and Algorithms

WORK EXPERIENCE

Turbot HQ, Inc. Remote

August 2022 – April 2026

Software Engineer I

- Core contributor across Steampipe, Powerpipe, Flowpipe, and Tailpipe with 120+ merged pull requests and 9,300+ combined GitHub stars, shipping production backend and data-platform capabilities in **Go**.
- Designed and developed a secure internal REST API microservice in **Go** (Gin) for Turbot Guardrails, implemented OAuth 2.0 (Auth0), containerized with Docker, deployed on **AWS EC2**, and integrated as a gRPC client with internal services.
- Built a **Kafka-based event-driven** pipeline for policy-enforcement workflows with asynchronous consumers and webhook notifications, and added a dead-letter queue (DLQ) path for recurring-failure investigation.
- Engineered high-volume data-pipeline features in Tailpipe (**Go + DuckDB + Parquet**), increasing throughput by 30% to 1,000+ logs/second while reducing memory usage to prevent out-of-memory failures.
- Built the Steampipe MCP server in **Python** to provide **LLM** agents standardized real-time access to cloud and security data for retrieval and analysis.
- Developed AI-powered workflows including a multi-agent orchestration system using OpenAI Agents SDK and a RAG-based internal Pydantic AI agent on **AWS Lambda** with S3 vector storage and Slack integration.

PROJECTS

General-Purpose AI Chatbot / Agent (Model Context Protocol) (Jun 2025 – Aug 2025)

Built an agentic chatbot framework with Pydantic AI and external MCP server support, including strict JSON validation, tool calling, model switching (OpenAI/Gemini/Anthropic/Mistral), conversation persistence, streaming output, and observability.

TODO / Tasks REST API (Apr 2026)

Built an API-first REST backend in TypeScript with Bun, Express.js, SQLite, and Zod, implementing JWT auth (access/ID/refresh), RBAC, schema-validated controllers, prepared-statement CRUD services, and migration-driven database management.

Friend-A-Book — Real-Time PDF Sharing Platform (2021)

Associated with University of Engineering & Management (UEM) / Kredey

Built a React + Firebase platform for document sharing with real-time chat and push/email notifications, including full-text and semantic search support over a **NoSQL** Firebase-backed system using Elasticsearch.

EDUCATION

University of Engineering & Management (UEM) Kolkata, WB, IN

August 2019 – May 2023

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.28

Relevant Coursework: Object-Oriented Programming, DBMS, Data Structures and Algorithms, Shell Scripting in Linux, Low-Level Design, High-Level Design
